Mte. Bento Balduino n 403 – Oficinas - Ponta Grossa – PR - Brazil

I have advanced experience in IT infrastructure and user support, an area that I have been working on for several years optimizing experience and knowledge. I'm very communicative, organized and detailed. I like to work as a team, but if there is a need to do tasks alone I will do them in the best possible way. I have now started to study and delve into the full-stack developer area, which I have already managed to produce some collaborative works.

## PROFESSIONAL QUALIFICATION

---

Process management in Node.js with virtualizations, maintenance and support of IT infrastructure, support to RDP users, management and configuration of AD DS | GPO on Windows Server. Maintenance of electronic power peripherals. Development of documentation for ERP system, assistance for implementation of system for production and e-commerce, documentation of tests made in WEB systems in order to map results and possible bugs.

## SKILLS

---
