Mte. Bento Balduino n 403 – Oficinas - Ponta Grossa – PR - Brazil

I have advanced experience in IT infrastructure and user support, an area that I have been working on for several years optimizing experience and knowledge. I'm very communicative, organized and detailed. I like to work as a team, but if there is a need to do tasks alone, I will do them in the best possible way. I have now started to study and delve into the full-stack developer area, which I have already managed to produce some collaborative works.

PROFESSIONAL QUALIFICATION

Process management in Node.js with virtualizations, maintenance and support of IT infrastructure, support to RDP users, management and configuration of AD DS | GPO on Windows Server. Maintenance of electronic power peripherals. Development of documentation for ERP system, assistance for implementation of system for production and e-commerce, documentation of tests made in WEB systems in order to map results and possible bugs.
